

Cross Session VCC1 & VCC3
Thursday 29 November 2012
15:45 - 16:45

Persistent Identifiers are a means to identify and locate objects. At the moment there are different solutions in place. These solutions all have a different approach.

DARIAH operates in a complex ecosystem where research infrastructures, journals and repositories all develop different policies and technical implementations regarding PID solutions.

DARIAH needs to develop its own policy how to deal with persistent identifiers. For this reason it will be interesting to find out what PIDs and policy research infrastructures, journals and repositories propagate. Also it is valuable to see what policy and systems are already in use by the DARIAH partner organizations.

Based on this investigation it will be of interest to discuss how DARIAH should cope with PIDs. For example choose one PID solution or make use of all existing PID systems if they comply to certain standards. And what kind of criteria should we define. The outcome of the cross session could be a working group which should develop a strategy for DARIAH.

Agenda

Introduction.

(Laurents Sesink: VCC3)

PIDs and policy in use by participants.

(Ye Cao: VCC1)

PIDs and policy from Research Infrastructures.

CLARIN, CESSDA, DASISH, EUDAT, EUROPENA, Open Aire+

(Ye Cao: VCC1)

Towards a DARIAH policy.

Models and criteria for PID solutions.

(Laurents Sesink: VCC3)
