

The GRDI2020 Roadmap Report "Global Scientific Data Infrastructures: The GRDI2020 Vision" is now available in its final release (December 2011).

Global Research Data Infrastructures must be developed for harnessing the accumulating data and knowledge produced by the communities of research, optimizing the data movement across scientific disciplines, enabling large increases in multi- and inter- disciplinary science while reducing duplication of effort and resources, and integrating research data with published literature. GRDI2020 announces the final release of its 10 year visionary Roadmap for Global Research Data Infrastructures.
