

In January 2008 Oxford University Computing Services (OUCS) joined the Preparing DARIAH project. The OUCS manages and maintains the IT infrastructure that is necessary for a world class university. It also hosts the Oxford Text Archive, the British National Corpus and the OSSWatch Advisory Service, to name but a few.

The Oxford University Computing Services' extensive knowledge of digital project management and metadata standards will support the Preparing DARIAH project, and we are thrilled to have OUCS on board.
